COURSE 8 INDIVIDUAL INSURANCE STUDY NOTE

INDIVIDUAL INSURANCE CASE STUDY

This case study will be used as a basis for examination questions. Be sure to answer the question asked by referring to the case study. For example, when asked for the advantages of a particular pricing approach used by a company referenced in the case study, your response should be limited to that company. Other advantages should not be listed, as they are extraneous to the question and will not result in additional credit. Further, if they conflict with the applicable advantages, no credit will be given.

Copyright 2004 by the Society of Actuaries

The Education and Examination Committee provides study notes to persons preparing for the examinations of the Society of Actuaries. They are intended to acquaint candidates with some of the theoretical and practical considerations involved in the various subjects. While varying opinions are presented where appropriate, limits on the length of the material and other considerations sometimes prevent the inclusion of all possible opinions. These study notes do not, however, represent any official opinion, interpretations or endorsement of the Society of Actuaries or its Education and Examination Committee. The Society is grateful to the authors for their contributions in preparing the study notes.

Saturn Life

Saturn Life at a Glance

Ownership Structure: Stock

Company Organization Date: 1975

Size:

- \$54 billion of life insurance in force (before reinsurance) as of 12/31/03
- \$285 million of life insurance premium (\$195 million retained after reinsurance) in 2003
- \$59 million of 1st year life insurance premium (\$41 million retained after reinsurance) in 2003
- \$320 million of annuity premium in 2003

Primary Distribution Channel: Non-agency building brokerage operation. A Brokerage General Agent, who is an independent contractor who can represent many companies, appoints brokers on behalf of the company. Saturn Life also contracts directly with some brokers without the use of a Brokerage General Agent.

Secondary Distribution Channel: Direct response, via mail, phone call centers and the Internet.

Ratings: Saturn Life is generally rated in the second tier of ratings. Ratings have remained steady, with the rating agencies satisfied with the quality of management and the prospects for growth through the current and new distribution systems. Profitability has been satisfactory, though the rating agencies have raised concerns with some unfavorable unit expense trends. Asset quality is high, though much of the business is either reinsured or consists of variable life insurance or variable annuities.

Primary/Core Products:

- Term life insurance
- Variable universal life insurance
- Variable annuities

Secondary products:

- Universal life insurance
- Fixed deferred annuities

Saturn Life Marketing Information

Marketing Goals:

- Increase term life insurance market share from 1% to 2% over next 5 years. The measure used is total face amount in force.
- Increase variable annuity and variable universal life assets under management 30% per year over next 5 years.

Marketing Strategies:

- Expand term insurance distribution channels.
- Expand variable policy investment options available to policy owners.

Competitive Strengths:

- Favorable name recognition within the marketplace and brokerage community.
- Reputation as a high quality, low cost insurance provider.

Competitive Weaknesses:

- Expenses that are higher than average versus similar companies.
- Not known for investment expertise.

Primary Markets:

- Affluent families
- Affluent pre-retired people

Critical Success Factors:

- Controlling expenses in order to maintain competitiveness of its term life products.
- Establishing a strong market position with competitive investment product offerings.
- Growing distribution systems.

Risks:

- It may not have the critical mass needed to achieve its goals in the term life insurance marketplace. Expenses may be too high, not allowing a competitive enough product.
- It may not be able to maintain the allegiance of brokers to the extent needed to achieve its marketing goals.
- Policy persistency has been worsening during the last three years. Further deterioration could begin to weaken profitability and cause increases in unit costs.

Saturn Life Distribution Channels

Overview:

- The primary distribution channel is a non-agency building brokerage operation.
- Saturn Life has been focusing on developing its direct response distribution channels. 2003 was the first year that sales through this channel were material. Almost 10% of its term life insurance was sold via the telephone, with the initial contact coming from either mail, the phone or the Internet.

Channel Structures:

- **Brokerage General Agents:** Independent contractors who represent many companies and appoint brokers on behalf of the company.
- **Brokers:** Saturn Life advertises heavily in the trade press, and is successful in contracting with brokers directly without the use of a General Agent. 25% of brokers placing business with the company are attracted through this approach.
- **Direct:** This channel centers on a phone-underwriting unit that receives leads from mail, phone and Internet requests. Saturn Life has developed strong advertising, communication and quote capabilities that can be launched efficiently and effectively, resulting in relatively predictable volumes of phone contacts for the underwriting staff to make.

Channel Compensation Structures:

The company pays the cost of contracting and licensing with the company as long as the broker sold one policy in the prior calendar year. Commissions are determined as a percentage of premium. If a general agent is involved in a sale, the general agent receives 20% of the total 1st-year commission, and the broker receives 80%. All renewal commissions are paid to the broker.

No commissions are paid for any sales made through direct distribution channels. The cost per sale in the direct market is currently being analyzed, but it is clear that costs vary significantly by the type of direct offering and by various demographic factors.

Saturn Life - Overall Financial Management Overview

Corporate Cost of Capital

Saturn Life's corporate parent finances its operations in the equity and debt markets and allocates capital to Saturn Life through an internal required surplus mechanism. Shareholders demand an after-tax annual return on the investment of 18.00%. Saturn Life's parent leverages its capital structure by employing a significant amount of debt financing. Its after-tax cost of long-term debt financing is 5.50%. Given the current mix of equity (60%) and debt (40%), Saturn Life's after-tax cost of capital is 13.00%.

Profit Measures & Targets

To meet its cost of capital and create value for its shareholders, Saturn Life's parent requires Saturn Life to achieve an after-tax return on equity of 15% in aggregate. In turn, Saturn Life has developed the following profit targets for its products. While some individual product profit targets have not been met, the aggregate target of 15% has generally been achieved.

Product	After Tax Return on Equity
Term Life	15.0%
Variable Universal Life	12.5%
Variable Annuities	20.0%
Other Products	15.0%

Internal Pricing Standards

Saturn Life traditionally reviews the adequacy of its pricing on an annual basis. This would include reviewing the adequacy of fixed account interest spreads, emerging mortality experience, actual versus expected expenses, a cost/benefit analysis of existing or proposed reinsurance, and sales by product and pricing cell. The competitive nature of the term life market necessitates a semi-annual review of this product. In addition, the company's Appointed Actuary conducts a peer review of this product assessment to gain further familiarity with the issues facing the company's product lines.

Experience Analyses

Saturn Life's Appointed Actuary annually reviews the emerging mortality and persistency experience for the company's life and annuity products in conjunction with the actuarial analyses that support Saturn Life's financial reporting. Recent experience is summarized below:

Calendar Year	<u>Actual to Expected Mortality & Lapse Ratios by Product</u>					
	<u>Term Life</u>		<u>Variable UL</u>		<u>Deferred Annuities</u>	
	<u>Mortality</u>	<u>Lapse</u>	<u>Mortality</u>	<u>Lapse</u>	<u>Mortality</u>	<u>Lapse</u>
1999	100%	100%	100%	100%	100%	105%
2000	98%	105%	99%	95%	100%	106%
2001	102%	110%	98%	95%	100%	107%
2002	99%	120%	99%	95%	97%	109%
2003	104%	120%	96%	95%	95%	112%

Saturn Life's product management actuary establishes credited interest rates for the fixed account investment options in its VUL and Variable Annuity products following periodic reviews of emerging investment results. Recent investment performance is summarized below:

Calendar Year	Gross	Investment	Default	Net	Actual	
	Investment	Investment	Losses	Earned	Credited Rate	
	Yield	Expenses		Rate	VUL	VA
1999	8.00%	0.10%	0.30%	7.60%	5.85%	6.10%
2000	7.75%	0.10%	0.30%	7.35%	5.60%	5.85%
2001	7.50%	0.10%	0.30%	7.10%	5.35%	5.60%
2002	7.25%	0.15%	0.25%	6.85%	5.10%	5.35%
2003	7.25%	0.15%	0.25%	6.85%	5.10%	5.35%

Reinsurance

Throughout its history Saturn Life has made extensive use of reinsurance in managing its life insurance product portfolios. Saturn Life reinsures 100% of its VUL net amount at risk in excess of its retention (currently \$500,000) on a yearly renewable term basis to a pool of 4 reinsurers, split evenly. Reinsurance premium rates are a percentage of the underlying cost of insurance on each product. To reduce mortality volatility and mitigate high first year underwriting and issue expenses, Saturn Life coinsures 90% of its term products to a pool of 5 reinsurers on a quota share basis. Each reinsurer assumes 18% of Saturn Life's new business and provides a reinsurance allowance equal to 100% of the reinsured premium. While the renewal reinsurance allowance varies by pool member, the average renewal allowance across all pool members and term products is 23%.

Saturn Life Product Overview

The products of Saturn Life currently consist primarily of variable universal life (VUL), variable annuities and a line of term life insurance products. Company management is satisfied with the growth of these core lines of business, though there is a perception that the growth of new term premium should be accelerating faster. VUL and term have been sold for several years, but the variable annuity was first sold in 2001.

Other smaller lines of business include:

1. a very small block of whole life, which is no longer being sold;
2. a small block of universal life which is available for sale, and growing, but is not actively being marketed; and
3. a declining block of fixed annuity business, which is still available but has experienced sales decreases of about 65% over the last five years.

Annual Sales for Term Life Insurance					
	1999	2000	2001	2002	2003

Saturn Life --Term Life Insurance

Overview

The term portfolio of Saturn Life consists of eight products:

- Annually renewable term
- 3-year renewable term
- 5-year level term
- 10-year level term
- 15-year level term
- 20-year level term
- Term-to-65
- Term-to-100

None of the plans have cash values, and all except the term-to-65 and term-to-100 plans have relatively liberal renewability and conversion features. A variety of riders are available on all the term plans:

- Waiver of premium
- Guaranteed purchase option
- Accidental death benefit rider

Sales are weighted heavily toward the 20-year level term plan, though sales of all plans, except the ART plan, have been increasing.

Product Features

The annually renewable term plan has the lowest initial premium. In most cases, the premium for a specific face amount increases each year. It is renewable to age 95.

The 3-year term plan has level premiums payable, and guaranteed, for three years. After three years, the policy owner can renew for another three-year period, during which the premium is level, and guaranteed not to increase. Like the ART plan, it also can be renewed through age 95.

The 5 and 10-year level term plans have level premiums that are guaranteed for the term of the contract. After the guarantee period, the policy owner can:

1. Renew the coverage at ART rates, through age 95,
2. Convert the term coverage to any cash value life insurance plan then offered by Saturn Life,
3. Attempt to be re-underwritten, and receive a new policy, or
4. Simply let the coverage end.

The 15 and 20-year plans have level premiums guaranteed for 10-years, and Saturn Life expects that those level premiums will also continue for the term of coverage. After 15 or 20 years, depending on the plan, the owner will have the same choices available to them as listed above for the 5 and 10-year plans.

The term-to-65 and term-to-100 plans are level premium plans, with premiums that are not guaranteed, but which are expected to remain level for the term of the product. These products are not renewable, but they do have conversion options at every fifth policy anniversary.

Investment Policy

The investments that are backing the term insurance line of business are not segregated from the rest of the general account assets of the company. The assets backing the line of business are shown in the term insurance balance sheet.

Underwriting Policy

All the term policies have premiums that vary by tobacco use. Saturn Life has moved toward preferred underwriting classifications; its standard class has been broken into three separate preferred classifications. Substandard percentage and flat extra ratings are available on all plans.

Underwriting guidelines are relatively aggressive, and the policy states that no exceptions are to be made to underwriting policies. The company takes the position that the underwriting is competitive, and that making exceptions to already competitive posture is inappropriate.

The company works with its primary reinsurers annually to assure its underwriting rules are appropriate for the mortality assumed in pricing.

Reinsurance

To reduce mortality volatility and mitigate high first year underwriting and issue expenses, Saturn Life coinsures 90% of its term products to a pool of 5 reinsurers on a quota share basis. Each reinsurer assumes 18% of Saturn Life's new business and provides a reinsurance allowance equal to 100% of the reinsured premium. While the renewal reinsurance allowance varies by pool member, the average renewal allowance across all pool members and term products is 23%.

Pricing

Key pricing assumptions are as follows:

- Mortality: Recent reinsurer experience.
- Lapse: Recent Saturn Life term life insurance experience (17% first year declining to 7% in year 6 and after)
- Expenses: 175% of first year premium
\$25 in all policy years
- Average Size: Recent experience with adjustment for planned changes in marketing.
- Mix of Business: Recent term life insurance mix of business.

The key pricing measure is the internal rate of return on distributable earnings, for one year of planned sales. This internal rate of return for the most up-to-date pricing assumptions is 9.15%. The company also reviews profit margin and the pattern of profitability for acceptability.

Saturn Life projects earnings and return on equity (ROE) with a pricing methodology that includes income-based reserves and a deferral of acquisition expenses. ROEs are projected to decrease versus the levels experienced in recent years.

Balance sheets are projected into coming years. These balance sheets are atypical relative to most lines of business because of the high percentage (90%) of term sales that are reinsured. Virtually all assets are deferred acquisition expenses, resulting in a high level of capital and surplus invested in the line of business, relative to the liabilities.

Mercury Life

Mercury Life at a Glance

Ownership Type:	Mutual
Company Organization Date:	1900
Size:	\$78.8 billion of life face amount in force as of 12/31/03 \$1,167 million in total life insurance premium in 2003 \$147 million of annuity premium in 2003 \$98.9 million of 1 st year life insurance premium in 2003
Primary Distribution Channel:	Agency building operation. Agency managers, who are employees of the company, manage the agencies.
Secondary Distribution Channel:	The company is planning to move into bank distribution of some of its products. In 2004, the company plans to determine a way for the agency manager and nearby agents to benefit in some way when the company has a relationship with a bank in their geographic area
Ratings:	The ratings for Mercury Life are in the highest tier of ratings. The company has successfully achieved growth while converting from a company focused on participating whole life insurance, to one growing its universal life insurance line of business. The company has a high quality distribution system that is well compensated and managed.
Primary/Core Products:	<ul style="list-style-type: none">• Par whole life• Universal life• Fixed deferred annuities
Secondary products:	<ul style="list-style-type: none">• Single premium immediate annuities• Investment products• Term life insurance• Disability income insurance• Long-term care insurance

Mercury Life Marketing Information

Marketing Goals:

- Improve productivity of its career agency distribution system 5% per year.
- Increase the number of products owned by its customers from an average of 1.50 to an average of 2.00.

Marketing Strategies:

- Position its career agency force as the best available in the country.
- Use advertising, phone support, and Internet advertising and quotes to provide improved sales leads for the career agency sales force.

Competitive Strengths:

- Highly productive, well-trained, field staff.
- Excellent brand value and name recognition in the marketplace.
- Strong financial strength

Competitive Weaknesses:

- Relatively poor name recognition in the younger market.
- Cannot compete on price-alone basis with the no and low-load products.

Primary Markets:

- Affluent and very wealthy
- Pre-retired and retired

Critical Success Factors:

- Continuing to improve productivity of the career agency system
- Developing its bank distribution channel in a manner accepted by its career agency system.

Risks:

- The career agency system, which the company is relying upon heavily, could become uncompetitive with the distribution systems that other competitors are developing.
- The distribution system and sales system is heavily reliant on complex, expensive technology, and little backup exists should problems occur.
- The company has chosen to focus on selling mutual funds and non-variable insurance and annuity products. A strong move of insurance and annuity buyers into the variable products marketplace could hurt prospects for the company's continued growth.

Mercury Life Distribution Channel

Overview:

Mercury Life relies on its strong, well-trained career agency system. It plans to develop the ability to sell insurance and annuities through banks by 2005.

Channel Structure:

The agency managers are employees of the company and are accountable for the hiring, training, motivation and conduct of the agents.

Channel Compensation Structure:

The agents receive commission income that is a percentage of premiums. The agency manager receives an override equal to 10% of the commissions the agents receive. The agency manager also receives compensation on bonuses that are based on the number of new agents that are hired, and the percentage of agents that sell above a minimum level. Mercury Life management has been discouraged by recent increases in the percentage of agents selling below the minimum levels.

Mercury Life --Overall Product Financial Management Overview

Corporate Cost of Capital

Mercury Life's philosophy has been to rely exclusively on accumulated par policyholder surplus to finance its operations. It allocates surplus to each product line through an internal required surplus mechanism. Mercury Life desires to provide its policyholders with a 10% after-tax return on surplus, after adjustment for required surplus.

Profit Measures and Targets

Mercury Life has established a number of profit criteria against which it assesses performance. In addition to the 10% return requirement described above, each product within a product line must have accumulated profits that turn positive by year 10, and a profit margin (present value of profit divided by present value of premium) equal to at least 5%.

Internal Pricing Standards

Mercury Life traditionally reviews the adequacy of its pricing on an annual basis. This would include reviewing the adequacy of fixed account interest spreads, emerging mortality experience, actual versus expected expenses, a cost/benefit analysis of existing or proposed reinsurance, and sales by product and pricing cell. In addition, the company's Appointed Actuary conducts a peer review of this product assessment to gain further familiarity with the issues facing the company's product lines.

Experience Analyses

Mercury Life's Appointed Actuary annually reviews the emerging mortality and persistency experience for the company's life and annuity products in conjunction with the actuarial analyses that support Mercury Life's financial reporting. Recent experience is summarized below:

Actual to Expected Mortality and Lapse Ratios by Product								
Year	Universal Life		Par Whole Life		Single Premium Immediate Annuity		Fixed Deferred Annuity	
	Mortality	Lapse	Mortality	Lapse	Mortality	Lapse	Mortality	Lapse
1999	90%	100%	100%	100%	95%	N/A	95%	105%
2000	89%	100%	99%	101%	95%	N/A	95%	107%
2001	91%	105%	102%	103%	95%	N/A	95%	110%
2002	90%	100%	103%	103%	94%	N/A	94%	110%
2003	88%	105%	105%	104%	94%	N/A	96%	112%

Mercury Life's product management actuary establishes credited interest rates for the UL and fixed deferred annuity products following periodic reviews of emerging investment results. Recent investment performance is summarized below:

Calendar Year	Gross	Investment	Default	Net	Actual	
	Investment	Investment	Losses	Earned	Credited Rate	
	Yield	Expenses		Rate	UL	Ann
1999	7.40%	0.15%	0.30%	6.95%	5.70%	5.95%
2000	7.30%	0.15%	0.30%	6.85%	5.60%	5.85%
2001	7.10%	0.15%	0.30%	6.65%	5.40%	5.65%
2002	7.00%	0.15%	0.25%	6.60%	5.35%	5.60%
2003	7.10%	0.15%	0.25%	6.70%	5.45%	5.70%

Reinsurance

Mercury Life makes very limited use of reinsurance in managing its life insurance product portfolios. It reinsures all of its Par Whole Life and UL net amount at risk in excess of its retention (currently \$5,000,000) on a yearly renewable term basis to a pool of 4 reinsurers, split evenly.

Mercury Life Product Overview

Mercury Life has three core products, and all have been available for several years. On the life insurance side, its block of universal life has grown to the size of its whole life block (as measured by total premium). Both products are relatively competitive, but the career agents perceive that the universal life product is more competitive than the whole life product. The average face amount for a UL sale has grown to nearly \$125,000, while the average size of a whole life sale is around \$100,000.

Sales of the fixed annuity have been declining significantly, and company management is concerned. A study is currently underway to assess causes of the trend, and identify options for improving deferred annuity sales.

Mercury Life initiated a marketing emphasis on single premium immediate annuity sales in 2003, and the number of sales grew from 64 in 2002 to 508 in 2003. Company management is extremely satisfied with the results, and expects that very strong growth will continue into 2004 and beyond.

Mercury Life sells a relatively small amount of term life insurance, and while it has not been a focus of the company, sales have more than doubled in the last 5 years.

Other non-core products that the career agents of Mercury Life sell include:

1. a disability income product (manufactured by Mercury Life);
2. a long-term care insurance product (available through brokerage outlets); and
3. a variety of investment products (available through brokerage outlets).

While sales of the disability income product have been slowly declining over the years, brokerage sales of the investment products and the long-term care insurance product have been increasing briskly.

Mercury Life – Universal Life

Overview

Mercury Life has been successful selling universal life since the mid-1980s. Initially, a product with surrender charges was sold, but in 1994 a front-end load was introduced, and sales have grown significantly since its development.

Product Features

The universal life policy sold by Mercury Life is a typical universal life design. A specified amount is chosen at issue, and premiums are flexible within limits allowed by tax laws. Mercury Life sells policies with both level and increasing specified amounts.

A variety of riders are available:

- Accidental Death
- Guaranteed purchase
- Waiver of premium
- Terminal illness

There is a 5% of premium front-end load, and a flat dollar amount load that is charged during early policy durations. The amount and duration of this flat front-end load is a function of the age and smoking classification of the policy. There are no surrender charges.

Investment Policy

Assets backing the universal life block of business are segregated from the rest of the assets of the company. Detailed liability models are analyzed annually, and the investment guidelines are adjusted as needed as a result of the duration of the liabilities.

Underwriting Policy

Mercury Life uses a traditional variety of underwriting tools including attending physician statements, personal health interviews, paramedical exams, and blood tests. Mercury Life periodically attempts to review its underwriting criteria versus industry norms, but it hasn't made significant changes in more than a decade.

There are separate rates for smoking and non-smoking classes, and there is a full slate of sub-standard cost of insurance rates available. There are no preferred underwriting classes.

Reinsurance

Mercury Life makes very limited use of reinsurance in managing its life insurance product portfolios. It reinsures all of its Par Whole Life and UL net amount at risk in excess of its retention (currently \$5,000,000) on a yearly renewable term basis to a pool of 4 reinsurers, split evenly.

Pricing

Key pricing assumptions are as follows:

Mortality: Company experience from 1997-2002 for all of its permanent life insurance.

Lapse: Company UL lapse rates experienced during 2000-2001 (15% first year declining to 6% in year 5 and after)

Expenses: 200% of first year premium
\$50 in all policy years

Average Size: Experience from 2000-2001.

Mix of Business: Experience from 2000-2001.

The key pricing measure is the internal rate of return on distributable earnings, for one year of planned sales. This internal rate of return for the most up-to-date pricing assumptions is 8.95%. The company also reviews profit margin and the pattern of profitability for acceptability.

Mercury Life projects earnings and return on equity (ROE) with a pricing methodology that includes income-based reserves and a deferral of acquisition expenses. Balance sheets are also projected into coming years. There are no plans for a major change to the way that universal life block of business is being managed.

Mercury Life – Participating Whole Life

Overview

The par whole life portfolio of Mercury Life includes the following products:

- Ordinary life to age 100
- Ordinary life, payable to age 65
- 20-pay ordinary life
- Single premium life
- Joint ordinary life

A variety of riders are available on these plans:

- Waiver of premium
- Guaranteed purchase option
- Accidental death

Sales for all par whole life plans have been flat in recent history.

Product Features

All plans pay annual dividends that reflect actual versus expected mortality, investment and expense experience, as well as other general business conditions. Dividends can be paid in cash, applied to pay premiums, or used to purchase paid-up additions

All plans endow at age 100 and pay level annual premiums throughout the premium paying period. Coverage endows at age 100 of the older insured for joint policies.

Policy loans are permitted on all plans, in amounts up to the contract cash surrender value. Policyholders can choose an 8% loan interest rate or a variable loan rate at the time of purchase. Loan activity is reflected in dividends on a policy-by-policy basis.

Cash surrender options include cash, extended term insurance and reduced paid-up. Life income settlement options are also available upon surrender or withdrawal. Settlements are based on current rates, and subject to minimums specified in each contract.

Investment Policy

The investments backing the participating whole life insurance line are included in the company's general account. The assets backing the line of business are shown in the par whole life insurance balance sheet.

Underwriting Policy

Mercury Life uses a traditional variety of underwriting tools including attending physician statements, personal health interviews, paramedical exams, and blood tests. Mercury Life periodically attempts to review its underwriting criteria versus industry norms, but it hasn't made significant changes in more than a decade.

There are separate rates for smoking and non-smoking classes, and there is a full slate of sub-standard cost of insurance rates available. There are no preferred underwriting classes.

Reinsurance

Mercury Life makes very limited use of reinsurance in managing its life insurance product portfolios. It reinsures all of its Par Whole Life and UL net amount at risk in excess of its retention (currently \$5,000,000) on a yearly renewable term basis to a pool of 4 reinsurers, split evenly.

Mercury Life – Fixed Deferred Annuities

Overview

The fixed deferred annuity portfolio of Mercury Life includes the following products:

- Flexible premium deferred annuities
- Single premium deferred annuity – 1-year interest guarantee
- Single premium deferred annuity – 3-year interest guarantee

Sales are heavily weighted toward the single premium products, though sales of all plans have been declining.

Product Features

All of the deferred annuity products are back-end loaded, with a surrender charge that grades from 7% of the accumulated value in year 1, to 0% in years 8 and later. The surrender charge is waived upon death and maturity, and contract holders have the option to withdraw up to 10% of the accumulated value each year without penalty of the surrender charge.

The product pays a new money credited rate, with a minimum of 3% guaranteed through the contract. Rates are reset annually for the flexible premium and one-year single premium contracts, and every three years for the three-year contract. Additional interest is also credited to larger contracts, according to the following schedule:

Accumulated Value	Credited Rate
\$0 – \$24,999	base rate
\$25,000 – \$99,999	base rate + 0.25%
\$100,000 and higher	base rate + 0.50%

A market value adjustment is applied to the three-year single premium contract.

Investment Policy

The investments backing the deferred annuity line are segregated from the rest of the general account assets of the company. The corresponding asset portfolio has a target duration of 3 years, and invests exclusively in bonds, mortgages and mortgage-backed securities. Roughly 5% of assets are held in cash equivalent investments.

Underwriting Policy

No underwriting is done on this block of business.

Reinsurance

The deferred annuities are fully retained by Mercury Life.

Mercury Life – Single Premium Immediate Annuities

Overview

The single premium immediate annuity portfolio of Mercury Life includes the following products:

- Life income annuity
- Joint life income annuity
- Life income annuity with period certain
- Joint life income annuity with period certain
- Specified period annuity

New emphasis on this product line has increased SPIA sales significantly in 2003, and sales are expected to grow steadily in the near future.

Product Features

The life income and joint life annuities provide a guaranteed income for the life of the annuitant(s). A certain period may also be included on the life annuities to provide payments for the life of the annuitant or until the end of the certain period, whichever is later. The specified period annuities provide guaranteed income for a specified certain period, which may range from 2 to 30 years.

The joint annuities can pay a full benefit for the life of the both annuitants, can drop down to 2/3 of the original benefit after the first death, or can drop down to 1/2 of the original benefit after the first death.

Annuity rates are reviewed weekly to reflect current market conditions.

The guaranteed payments can only be commuted by death. In other words, there are no surrender values or rights.

Payment frequency can be monthly, quarterly, semi-annually or annually.

Investment Policy

The investments backing the SPIA line are segregated from the rest of the general account assets of the company. The corresponding asset portfolio attempts to duration-match the annuity liability cash flows. Investments in this segregated portfolio are limited to bonds, mortgages and mortgage-backed securities.

Underwriting Policy

The maximum single premium per contract is \$1,000,000, unless specifically approved by the company. Satisfactory proof of date of birth is required for each life contingent SPIA contract.

Reinsurance

SPIA liabilities are fully retained by Mercury Life.

Assumptions to use in Examination Questions

The following lapse rates, risk free rates of return, inflation rates and mortality rates should be used in examination questions, unless other assumptions are specifically identified within the exam question.

These assumptions were not used in the determination of numbers within the case study. They are provided to potentially avoid needing to place such assumptions within exam questions themselves.
